Mini Project Week 6

Let's now maintain all our data in the database. We'll create an orders table and an orders status table and refactor our app to make use of it.

Goals

As a user I want to:

- create a product, courier, or order and add it to a table
- view all products, couriers, or orders
- update the status of an order
- persist my data
- *STRETCH* delete or update a product, order, or courier
- *BONUS* list orders by status or courier
- *BONUS* CRUD a list of customers
- *BONUS* track my product inventory
- *BONUS* import/export my entities in CSV format

Spec

- A row in the `products` table should contain the following information:

```
{  
  "id": 4,  
  "name": "Coke Zero",  
  "price": 0.8  
}
```

- A row in the `couriers` table should contain the following information:

```
{  
  "id": 2,  
  "name": "Bob",  
  "phone": "0789887889"  
}
```

- A row in the `orders` table should contain the following information:

```
{
  "id": 1,
  "customer_name": "John",
  "customer_address": "Unit 2, 12 Main Street, LONDON, WH1 2ER",
  "customer_phone": "0789887334",
  "courier": 2, // Courier ID
  "status": 1, // Order status ID
  "items": "1, 3, 4" // Product IDs
}
```

- A row in the `order_status` table should contain the following information:

```
{
  "id": 1,
  "order_status": "preparing"
}
```

```
# we are no longer reading products, couriers, orders and order statuses from
# we are now reading data from database tables
```

```
PRINT main menu options
GET user input for main menu option

IF user input is 0:
  EXIT app

# products menu
ELSE IF user input is 1:
  PRINT product menu options
  GET user input for product menu option

  IF user inputs 0:
    RETURN to main menu

# WEEK 5 UPDATE
ELSE IF user input is 1:
  GET all products from products table
  PRINT products

# WEEK 5 UPDATE
ELSE IF user input is 2:
  # CREATE new product

  GET user input for product name
  GET user input for product price
```

INSERT product into products table

WEEK 5 UPDATE

ELSE IF user input is 3:

STRETCH GOAL – UPDATE existing product

GET all products from products table

PRINT products with their IDs

GET user input for product ID

GET user input for product name

GET user input for product price

IF any inputs are empty, do not update them

UPDATE properties for product in product table

ELSE IF user input is 4:

STRETCH GOAL – DELETE product

GET all products from products table

PRINT products with their IDs

GET user input for product ID

DELETE product in products table

couriers menu

ELSE IF user input is 2:

PRINT courier menu options

GET user input for courier menu option

IF user inputs 0:

RETURN to main menu

WEEK 5 UPDATE

ELIF user inputs 1:

GET all couriers from couriers table

PRINT couriers

WEEK 5 UPDATE

ELSE IF user input is 2:

CREATE new courier

GET user input for courier name

GET user input for courier phone number

INSERT courier into couriers table

WEEK 5 UPDATE

ELSE IF user input is 3:

STRETCH GOAL – UPDATE existing courier

GET all couriers from couriers table

PRINT couriers with their IDs

GET user input for courier ID

```
GET user input for courier name
GET user input for courier phone number
```

```
IF an input is empty, do not update its respective table property
UPDATE properties for courier in couriers table
```

```
# WEEK 5 UPDATE
```

```
ELSE IF user input is 4:
    # STRETCH GOAL – DELETE courier
```

```
GET all couriers from couriers table
PRINT courier with their IDs
```

```
GET user input for courier ID
DELETE courier in couriers table
```

```
# orders menu
```

```
ELSE IF user input is 3:
```

```
IF user input is 0:
    RETURN to main menu
```

```
# WEEK 6 UPDATE
```

```
ELSE IF user input is 1:
    GET all orders from orders table
    PRINT orders
```

```
# WEEK 6 UPDATE
```

```
ELSE IF user input is 2:
    # CREATE order
```

```
GET user input for customer name
GET user input for customer address
GET user input for customer phone number
```

```
GET all products from products table
PRINT products
GET user inputs for comma-separated list of product IDs
CONVERT above user input to string e.g. "1,3,4"
```

```
GET all couriers from couriers table
PRINT couriers
GET user input for courier ID
```

```
SET order status to be 1
INSERT order into orders table
```

```
# WEEK 6 UPDATE
```

```
ELSE IF user input is 3:
    # UPDATE existing order status
```

```
GET all orders from orders table
```

PRINT orders with their IDs

GET all order statuses from order_status table
PRINT order statuses

GET user input for order ID

GET user input for the updated order status ID

UPDATE status for the order

WEEK 6 UPDATE

ELSE IF user input is 4:

STRETCH – UPDATE existing order

GET all orders from orders table
PRINT orders with their IDs
GET user input for order ID

GET user input for customer name
GET user input for customer address
GET user input for customer phone number

GET all products from products table
PRINT products
GET user inputs for comma-separated list of product IDs
CONVERT above user input to a string e.g. "2,1,3"

GET all couriers from couriers table
PRINT couriers
GET user input for courier ID

UPDATE order in orders table

WEEK 6 UPDATE

ELSE IF user input is 4:

STRETCH GOAL – DELETE courier

GET all orders from orders table
PRINT orders with their IDs

GET user input for order ID
DELETE order in orders table
